

DEPARTMENT PLAYBOOK

Admin & Process Admin

Your step-by-step guide to setting up and running Agrocorp CRM — company setup, users, roles, integrations and system health.

Super Admin

Process Admin

User Manual · If you get stuck, find your task in the contents and follow the numbered steps.

Who this guide is for

The two administration roles that keep the whole CRM running.

ROLE	WHAT YOU DO	WHAT ONLY YOU CAN DO
Super Admin	Owns the entire system	Everything, incl. "Preview Roles" and locking the Super Admin role
Process Admin	Runs day-to-day setup	Users, projects, automations, integrations (cannot override the Super Admin lock)

Difference in one line: Super Admin can do **everything**; Process Admin does everyday setup and configuration but a few owner-only controls stay with the Super Admin.

Your home screen

After you log in you land on the **Dashboard**. The left menu is grouped into Overview, Sales, Deals & Finance, Messaging, Automation & Setup, Partners and **Administration** (the section you'll use most).

Admin dashboard — a company-wide overview: setup progress banner on top, then live pipeline numbers, hot/warm/cold split, funnel, top sources and integration health. It shows the whole business at a glance, not individual leads.

Tip: Press **Ctrl + K** (Windows) or **Cmd + K** (Mac) anywhere to search a lead or jump to any page instantly.

Logging in for the first time

- 1 Open the CRM link in your browser (Chrome or Edge recommended).
- 2 On the sign-in screen, type your **email** in the Email box.
- 3 Type your **password** in the Password box.
- 4 Click the black **Sign in** button.
- 5 If it's your very first login, the system asks you to **set a new password** — type it twice and confirm.
- 6 You now land on the Dashboard.

TASK 1 – Complete the first-time company setup

The very first Admin is guided through a short wizard. The side menu stays hidden while the wizard runs so you can focus; it reappears when you finish or skip to the dashboard.

1. Set up your profile

- 1 Confirm your name and phone number.
- 2 Pick an avatar colour (optional).
- 3 Click **Continue / Next**.

2. Set up your first project

- 1 Enter the project **name** (e.g. "Green Valley Plots").
- 2 Enter the **city** and **zone/locality**.
- 3 Choose the **unit type** (Plot, Apartment, Villa...).
- 4 Enter the price range if asked.
- 5 Click **Save / Next**.

3. Map your department users

- 1 Add each team member's **name**, **email** (their login ID) and **phone number** (their first-time password).
- 2 Pick their **role** from the list (Sales Head, BDE, Accounts Head...).
- 3 Click **Add user** and repeat for everyone.

4. Upload inventory

- 1 Add the phases and the plots/units for your project.
- 2 Mark each unit's status (Available / Held / Booked / Sold).

5. Assign a Process Admin

- 1 Choose a trusted team member to help run daily setup.
- 2 Click **Finish** — the full menu now appears.

Need to redo the demo? On the dashboard, the setup banner has a **Restart setup** button that resets the wizard.

TASK 2 – Add a new user

Administration → Users & Roles – your team directory grouped by department.

- 1 In the left menu, open **Administration** → **Users & Roles**.
- 2 Click the **Add user** button (top right).
- 3 Type the person's **full name**.
- 4 Type their **email** – this becomes their login ID, so type it carefully.
- 5 Type their **phone number** – this becomes their temporary password for the first login.
- 6 Pick their **role** from the dropdown (this decides what they can see and do).
- 7 Click **Save**.
- 8 Tell the person their email and that their first password is their phone number.
- 9 They will be forced to set a new password the first time they log in.

Note: Sending the welcome email is **mocked** until you connect a real email account in Integrations. Until then, share the login details yourself.

Turn a user on or off

- 1 Open **Users & Roles**.

- 2 Find the person's card (use the search box if the list is long).
- 3 Use the **active toggle** on their card — off means they can no longer log in.

TASK 3 – Change what a role can do (Roles & Access)

Roles & Access — permissions grouped by area, with on/off switches.

- 1 Open **Administration** → **Roles & Access**.
- 2 On the left, click the **role** you want to change (e.g. "Accounts Support").
- 3 The middle shows features grouped by area (Accounts & Finance, Messaging, etc.).
- 4 Use the **search box** to find a specific feature quickly.
- 5 Flip an individual **toggle** on to grant it, or off to remove it.
- 6 Use the **"All"** switch on a group header to turn a whole group on or off.
- 7 Click **Save access** (top right).

Two things to remember: (1) The **Super Admin** role is locked — you can't reduce its access. (2) Changes take effect the **next time that user logs in**.

Reset a role to its defaults

- 1 Select the role. If it was changed, a **Customised** badge shows.

- 2 Click **Reset to default** to restore the standard access for that role.

TASK 4 – Connect your own accounts (Integrations Hub)

Administration → Integrations – connect WhatsApp, Email and Calling.

This is where you switch the CRM from safe demo mode to sending real WhatsApp, email and calls. Only Admin and Process Admin can see this page.

General steps for any integration

- 1 Open **Administration** → **Integrations**.
- 2 Click the card you want to set up (Meta WhatsApp, Google Email or Mcube).
- 3 Fill each field in the form. Fields marked * are required.
- 4 Click **Test connection** and wait for the result.
- 5 If you see a green tick, click **Save**.
- 6 Turn the card's **toggle on** to go live.

Safety: Your passwords and tokens are **encrypted** and never shown again – you'll only ever see dots like **••••1234**. You **cannot** turn an integration on until all required fields are filled, and if you change a field you must **test again** before it goes live.

META WHATSAPP CLOUD – FIELDS

- Phone number ID

- Access token
- Verify token (for the webhook)

GOOGLE WORKSPACE EMAIL – FIELDS

- SMTP host (default **smtp.gmail.com**) and port (default **587**)
- Username (the dedicated mailbox address)
- App password (generated in Google – not the normal password)
- From name and from email

MCUBE – FIELDS

- Base URL
- Auth token
- Caller ID

Before you start: get your credentials ready with your IT person. You paste them **into the CRM form** – never into chat or email.

TASK 5 – Build an automation (Flow Builder)

Flow Builder – drag blocks onto the canvas and connect them.

- 1 Open **Automation & Setup** → **Flow Builder**.
- 2 Click **Starter flows** to begin from a ready-made journey (recommended), or start blank.
- 3 Drag a **Trigger** block onto the canvas (e.g. "On new lead").
- 4 Drag action blocks — **Send WhatsApp**, **Send Email**, **Create Task**, **Wait / Delay**, **Condition**.
- 5 Connect blocks by dragging from one block's dot to the next.
- 6 Click a block to configure it in the right-hand **Node settings** panel.
- 7 Use the **Mission checklist** (bottom right) to create any templates the flow needs.
- 8 Click **Validate**, then **Save flow**.
- 9 Click **Test run** to try it, then **Activate** to make it live.

Good to know: An active flow runs automatically when its trigger happens for a real lead. If a step fails, it is marked as failed (not silently skipped) so you can see it.

TASK 6 – Check system health & the audit log

RECENT ERRORS

System & Integration Health — comms sent, automation success and search speed.

- 1 Open **Administration** → **System Health** to see message volume, automation success and search latency. "MOCK" means that integration is still in demo mode.
- 2 Open **Administration** → **Audit Log** to see exactly who changed what, and when.
- 3 Use the **filters** at the top of the Audit Log to narrow by action or by entity type (e.g. "Lead").

Audit Log — a full, filterable trail of every change.

TASK 7 — See the app as another role (Preview Roles)

- 1 Open **Administration** → **Preview Roles** (Super Admin only).
- 2 Choose the role you want to preview.
- 3 The CRM now shows exactly what that role sees — useful before you hand access to a team.
- 4 Exit preview to return to your own view.

Quick answers

QUESTION	ANSWER
A user says they can't log in	Check they use their email as ID; confirm their account toggle is on in Users & Roles.
My permission change didn't apply	It applies at the user's next login — ask them to sign out and in.
Are real messages going out?	Only after you connect and enable the integration. Otherwise it's demo mode.
I need to redo the demo data	Use "Restart setup" on the dashboard banner.
